

BIOL 448J – Microbial Ecology

3 credit course taught in Fall 2019

Instructor: Laura Parfrey Teaching Assistant: Ilan Rubin

Microbes are all around us, and do fascinating things: they change the shape of seaweed, alter human behavior, and powering geochemical cycles and much more. This is a project-based course designed to help students become good scientists. Throughout the course students will develop and practice transferrable research skills including:

- writing,
- presentations,
- developing research questions,
- data analysis and interpretation in R

Level: Designed for 4th year students, open to keen 3rd year students and grad students.

Lectures: MW 11 - 11:50

Lab: Th 14:00 - 17:00
